

Restaurant Inspection Made EZ

Easily inspect and share food establishment data with your community

EZFORMS State & Local Restaurant inspection software is a cost effective and robust solution for the inspection of restaurants and other types of food establishments. By leveraging EZFORMS restaurant inspection software, state and local health inspectors can visit more food establishments and instantly share results with establishment owner/operators and the community.

EZFORMS State & Local Restaurant inspection software is an end-to-end solution that allows inspectors to easily collect critical food compliance and restaurant operational data that is essential to the welfare of the community. We give municipalities the ability to centrally store inspection data to easily retrieve past inspections and uncover trends in their cities.

CUSTOMIZE SOLUTION

Even though we think we have the best out of the box solution in the industry, we created a platform that will allow you to create the solution that meets your specific needs.

SUPPORT SOLUTIONS

- MASTER SERVICE AGREEMENTS
- EMAIL AND PHONE SUPPORT

flexible solution for your city's needs

EASE OF USE FOR THE INSPECTOR

Drop the paper checklist and/or carbon copy paper and collect inspection data via mobile devices or personal computers. We provide a robust portal to easily create and edit inspection forms in any way you want to design them. The portal gives users the ability to review past inspections and validation materials such as pictures and notes. Registered users can easily share past inspections internally or provide raw data to third party entities as needed.

EASE OF USE FOR THE PATRON

Patrons can review current and past food inspections via a robust portal that allows search by restaurant name, food type, grade or zip code. Once a restaurant is selected, the patron is presented with a responsive web portal that gives a map view, the physical address, last inspection score, drill down of current and past inspections as well as a view of the inside of the restaurant.

EZFORMS STATE & LOCAL RESTAURANT SOFTWARE IS A TOTAL END TO END SOLUTION

IMPLEMENTATION SERVICES

While we have built our solution to be easily deployed, we also understand that you might need some help getting started.

That's where our Implementation Services group can help you get those custom inspections built. We accomplish this by leveraging our experience with deploying and training all sorts of teams and businesses. Jump start your deployment by using our Implementation Services to get your inspection, portal and training implemented for your city.

SaaS SOLUTION

EZFORMS State & Local Restaurant Inspection solution is a robust SaaS solution that allows users to execute inspections via mobile devices and traditional laptop computers.

RESTAURANT SEARCH

As part of our solution you get a portal that allows users to search by name, date, score and food type. Just want the raw data? No problem! Just let us know where to point the data.
